

Career prospects of Vocational High School graduates in the industrial sector

The action "Career prospects of Vocational High School graduates in the industrial sector" aims to inform students of Vocational High Schools (VHS) about career prospects in the rapidly developing sectors of the Greek manufacturing industry, the employment and development opportunities for young people in their local area, as well as prepare them to enter the job market. Students will have the opportunity to participate in activities related to CV writing and preparing for job interviews, and discuss with employee executives of Cenergy Holdings, ElvalHalcor and Sidenor, who will serve as mentors and share their knowledge and experiences.

The action is addressed to students of Vocational High Schools of the Mechanical Engineering and Electrical, Electronics and Automation sectors, and consists of 3 main sections:

- Attending a masterclass focusing on how to ask more targeted questions. The aim is to further develop students' soft skills (critical thinking, problem-solving, creativity).
- Receiving information about professions and sectors of the modern Greek industry with practical examples, and presentation of job and career development opportunities in industrial facilities in the local community.
- Preparation for labor market integration. Students will have the opportunity to showcase their training and skills in an optimal way, both in their CV and during a job interview.

The action is implemented with the support of Cenergy Holdings, ElvalHalcor and Sidenor for the school year 2023-2024.
