

Local economy & the modern labour market

The Tipping Point Program is implemented at Lala's High School and aims to pander to the needs of students by contributing to their all-round empowerment in relation to new and modern aspects of professions and practices that can flourish in their local area, as well as the new development perspectives that arise from familiarity with new technologies.

Students will have the opportunity to explore new perspectives of professions and prospects in their local area, such as production (olive oil, honey, wine), agri-tourism, entrepreneurship, as well as the new possibilities offered by the constant technological progress. At the same time, they will have the opportunity to learn about employment sectors in which they could not conventionally be employed in their region and which the conditions of the modern labour market have made accessible.

Finally, the action will allow groups of participants to develop their soft skills through familiarization and use of Productive Artificial Intelligence tools. In this way, and through educational workshops, students and teachers will have the opportunity to learn about the potential of Productive AI and its integration into the workflows of students and teachers.

Lala High School's participation in The Tipping Point Program is supported by the **Folloe Foundation** for the 2023-2024 school year.
